

Technical description

Power: Each motor is rated at 0.75 kW
Speed: 1 m/minute
c/c between towers: varies depending on the span.

Accessories:

- Gantry crane/traversing crane with lifting capacity up to 12 tonne
- Lighting
- Facade protection
- Working platform etc.

Read more about System Gibson weather protection on pages 24-25.

Gibson Tower

A further development of the System Gibson allows the weather shield to use electrically operated platforms so it can climb up the building, floor by floor until it reaches the roof. Gibson Tower frees the ground around the building since no scaffolding is needed and it is flexible in height and sideways.

System Gibson Tower can be supplemented by a traversing crane of capacity up to 12 tonne, which avoids the use of a tower crane or other lifting devices. Gibson Tower can be supplemented by facade protection, lighting etc. to produce a complete, mobile production site. Working platforms with fall protection can be supplemented by suspended scaffolding.
