

Rental tarpaulins

Tarpaulins can handle wear and rough handling, and are flexible even when they are cold. They are made from a durable, water-repellent fabric, which retains its flexibility even in severe cold and is provided with ropes and eyelets for stable anchorage.

Damage insurance

If you enhance your rental agreement with damage insurance, you avoid the extra costs of washing and repairing (but not the costs of completely ruined or lost tarpaulins).

Technical description

Dimensions: 4.5x7 and 6x10 m

Weight: 680 g/m²

Material: Polyamide or polyester fabric with half Panama weave. Softened plastic coating.

Surface structure: matte

Thickness: 0.6 mm

Tensile strength: warp 300 kp, weft 270 kp (acc. to SIS 650009)

Tear strength: warp 45 kp, weft 45 kp (acc. to SIS 251231)

Coating adhesion: 10 kp/cm

Temperature resistance: -35°C till +70°C

Wear resistance: Very good

Other information: Polypropylene ropes, brass eyelets.
