

## Transport covers

Transport covers are a customised solution using PE fabric in hoods and rolls. The material is tear resistant and very durable, since the product is woven.

Transport covers make your products independent of the time of year and unexpected weather changes. Typical applications are temporary weather protection for transporting building modules, site huts, timber etc. Transport covers can be customised to suit your requirements.

### **Comply with Work Environment Authority requirements.**

NSS Sweden' non-slip treated and tear-resistant transport covers comply with Work Environment Authority requirements for friction and with the Technical Research Institute of Sweden requirements for tread penetration.

### **Technical description**

Material: Polyethylene, 8x8 /square inch

Total weight: min 75 g/m<sup>2</sup>

Temperature resistance: -50°C – +70°C

Size: To suit your requirements

Packaging: On pallets

Marking: Your logotype, timber dimensions, weight mm

Option: Anti-slip non-slip treatment on top
